Your structure's digital security

Cyber security

New technologies and digital transformation are changing our lifestyle and the functioning of our businesses on a daily basis. Manhattan uses its expertise to provide solutions to the challenges of secure network computing.

Against Internet hazards Cyber security

- Intrusion test / PENTEST
- Configuration audit
- Secure architecture auditing and consulting (infrastructure, devices, applications, IoT, etc.)

Security policy Security governance

- Risk analysis and mapping
- Awareness enhancement and training
- Security master plan
- Organizational audit
- ISSP-ISMS, BCP-DRP

Active security monitoring Response to incidents

The Manhattan SOC offers an as-a-service model to provide a security incident detection service; whatever your level of maturity in the field, Manhattan will adapt its system to assist you in the identification of your detection objectives, the definition of the detection architecture and the implementation of the technical and organizational systems to deliver your security operating centre.

Perimeter security

Business protection Cyber security: System protection

Manhattan advises you and designs and upgrades the global security systems of your information system. With its partners, Manhattan deploys, maintains, supervises and manages your security solutions:

- Firewall
- Workstation compliance
- Data protection
- Antivirus
- URL filtering
- Strong authentication
- HotSpot
- Email content check
- Data access control
- Security audit, etc.

Business accessibility VPN: Virtual private networks

VPNs (virtual private networks) instantly increase a company's accessibility via the Internet, without sacrificing the security and reliability which characterize private networks. Manhattan designs and supervises the MPLS and IPSEC VPNs for its customers and provides "turnkey" solutions through its partner Lasotel for its MPLS.

Durability of your investment Security maintenance and facilities management

- Manhattan manages the accounts, the computers and all the equipment in your company's computer network.
- We make sure that users have fast access to the information system and to security, data backup and changes in your networks.

Security and networks outsourced services

Security Operating Center The SOC, your security management portal

Operating center dedicated to security.

Network Operating Center The NOC, your digital networks management portal

Operating center dedicated to networks.

Your business digital networks

Connection of your structures to networks

Business connectivity NETWORK: Network integration

Manhattan advises and intervenes in the design and development of your network architectures. With its partners, Manhattan deploys, maintains, supervises and manages your networks.

- Lan (Cisco, Extreme Networks and HP)
- Wifi (Cisco, Aruba, Extreme Networks and Aerohive)

Business accessibility VPN: Virtual private networks

VPNs (virtual private networks) instantly increase a company's accessibility via the Internet, without sacrificing the security and reliability which characterize private networks.

Manhattan designs and supervises the MPLS and IPSEC VPNs for its customers and provides "turnkey" solutions through its partner Lasotel for its MPLS.

Wireless accessibility WiFi networks

When well organized, a WiFi network is now fast and secure.

With a wireless network, you gain in mobility in your company. Mobile workstations, smartphones and tablets: you stay connected everywhere and stay responsive.

Network architecture Network equipment and wiring

To link the various entities of a network, a number of physical data transmission media can be used. One of these possibilities is the use of cables.

Durability of your investment Network maintenance

Manhattan manages the accounts, the computers and all the equipment in your company's computer network.

We make sure that users have fast access to the information system and to security, data backup and changes in your networks.

Your structure's communication

Business communication TEL IP: IP telephony

Manhattan answers the company's needs with solutions which are accessible to users anywhere and any time and which use:

- IP telephony solutions for the long term
- Communication platforms
- Company phones and office peripherals
- Conferences and collaboration
- Messaging solutions
- Wireless solutions
- Call centers
- Telecommuting

Business communication Videoconferencing

With its partner Vidyoo, Manhattan answers the company's needs with solutions which are accessible to users anywhere and any time and which use:

- Videoconferencing solutions
- Communication platforms
- Conferences, collaboration, telecommuting

Managed Service Provider MSP, for the tranquility of your business

Through the setting up of the SOC and/or the NOC, Manhattan manages and supervises its customers' networks, VPNs and firewalls in real time.

In addition, Manhattan offers services of assistance and support in the supervision and management of its solutions through to complete outsourcing: supervision of VPNs, security solutions and networks by a proactive diagnostic system
